

# Characterization Of Semiconductor Heterostructures And Nanostructures

**Author :** Giovanni Agostini Carlo Lamberti / **Category :** Science  
/ **Total Pages :** 828 pages

 [Download Characterization Of Semiconductor Heterostructures And Nanostructures PDF](#)

**Summary :** Free characterization of semiconductor heterostructures and nanostructures pdf download - characterization of semiconductor heterostructures and nanostructures is structured so that each chapter is devoted to a specific characterization technique used in the understanding of the properties structural physical chemical electrical etc of semiconductor quantum wells and superlattices an additional chapter is devoted to ab initio modeling the book has two basic aims the first is educational providing the basic concepts of each of the selected techniques with an approach understandable by advanced students in physics chemistry material science engineering nanotechnology the second aim is to provide a selected set of examples from the recent literature of the top results obtained with the specific technique in understanding the properties of semiconductor heterostructures and nanostructures each chapter has this double structure the first part devoted to explain the basic concepts and the second to the discussion of the most peculiar and innovative examples the topic of quantum wells wires and dots should be seen as a pretext of applying top level characterization techniques in understanding the structural electronic etc properties of matter at the nanometer and even sub-nanometer scale in this respect it is an essential reference in the much broader and extremely hot field of nanotechnology - comprehensive collection of the most powerful characterization techniques for semiconductors heterostructures and nanostructures - most of the chapters are authored by scientists that are world wide among the top-ten in publication ranking of the specific field - each chapter starts with a didactic introduction on the technique - the second part of each chapters deals with a selection of top examples highlighting the power of the specific technique to analyse the properties of semiconductors heterostructures and nanostructures
