Summary : Free additional tables for the hydraulic design of pipes sewers and channels pdf download - the aim of these tables is to overcome limitations in the existing hydraulics research tables for the hydraulic design of pipes and sewers the current edition of the tables is limited to pipe diameters of two metres and to a couple of pipe shapes the additional tables which are designed to be used in conjunction with the existing 5th edition of tables for the hydraulic design of pipes and sewers would extend the diameter to 20m new interpolation procedures for part-full pipes and pipes of other cross-sectional shapes other than circular and one particular form of egg-shape can be determined
