Summary : Free the state of world fisheries and aquaculture 2006 pdf download - several decades ago the efforts of public administrations were concentrated on developing fisheries and aquaculture and ensuring growth in production and consumption then in the 1980s as many resources became fully or overexploited the attention of policy-makers began to focus instead on fisheries management in addition to development of aquaculture subsequent recognition of the many failures in management have now led fao member countries and other relevant stakeholders to broaden the approach and governance that is the sum of the legal social economic and political arrangements used to manage fisheries and aquaculture in a sustainable manner is currently seen as a necessary context for management and is becoming the main concern aquaculture continues to expand while marine capture fisheries - when summed together worldwide - seem to have reached a ceiling reflecting the growing importance of aquaculture the state of world fisheries and aquaculture ends with a discussion of the challenges that aquaculture is facing as well as of the opportunities that are open to the sector the discussion is based on a prospective analysis of the aquaculture sector worldwide which was undertaken by fao in the past two years includes the fourth edition of the fao world fisheries and aquaculture atlas cd-rom a comprehensive and global view of marine and inland capture fisheries and aquaculture available in english

Publisher : Food Agriculture Org on 2007 / **ISBN :** 9251055688
