Summary : Free interoperability cost analysis of the u s automotive supply chain pdf download - nist s manufacturing engineering laboratory mel is developing standards that promote interoperability among members of the u s automotive supply chain this study assesses the costs of imperfect interoperability to the u s automotive supply chain and describes the sources of these costs this study estimates that imperfect interoperability imposes at least 1 billion per year on the members of the u s automotive supply chain by far the greatest component of these costs is the resources devoted to repairing or reentering data files that are not usable for downstream applications
